CHANGELOG

v8.4.0

Mar 9 2019

- Added support for `tag_data` property in the front matter
- Fixed ordering of selected projects post in `welcome` layout
- Updated dependencies

v8.3.0

Feb 18 2019

This version adds new options to increase performance. Learn more in this post (/blog/hydejack/2019-02-18-improving-site-build-speed/).

Added

- Added `hy-progress-bar` custom element to show progress of page navigation
- Added `prism` config option to disable syntax highlighting
- Added `hy-push-state` custom element to enable navigation without JavaScript

Changed

- Changed `hy-push-state` to be a custom element

v8.2.0

Feb 1 2019

- Added support for custom `_includes/post.*`
- Removed footer from post layout
- Increased photo size around readtime
- Improved `jekyll clean` service worker generation performance
- Fixed a bug that prevented encoding of newsletter with non-ascii characters (thanks @ForelaxX (https://github.com/ForelaxX)

v8.1.1

Sep 1 2018

Fixes

- Fixed an issue that prevented the theme from working on GitHub Pages
- Changed the regex for post urls so that now `post.date` can be used in `_config.yml`
- Changed the regex for post urls so that now `post.date` can be used in `_config.yml`
- Fixed an issue that prevented the theme from working on GitHub Pages

v8.1.0

Aug 18 2018

- Fix issue where some users could not install the theme

Breaking

- Removed `_data/theme.yml` from the theme
- Removed `_data/options.yml` from the theme

Jul 16 2018

Front Matter defaults (https://jekyllrb.com/docs/configuration/#front-matter-defaults)

```
defaults:
  - scope:
      path:         hydejack
    values:
      accent_color: rgb(38,139,210)
      accent_image: /assets/img/hydejack-bg.jpg

#53 (https://github.com/qwtel/hydejack/pull/52)

#55 (https://github.com/qwtel/hydejack/pull/55)

Other

- Test base.test.js in `.travis` Travis CI build

- Test resume.html template in case of problems (not always)

v7.4.2

Dec 1 2017

Fixed

- Erroneously unminified resume.html template in npm module (see #xxx). Now, the `.npmignore` file is ignored.

- Prevent error when clicking the pages in Safari when loading [#xxx](#xxx)

- Prevent error when clicking the pages in Safari when loading [#xxx](#xxx)

v7.4.1

Nov 27 2017

Fixed

- Prevent scrolling when clicking links in the sidebar (e.g. on mobile)

- Prevent scrolling when clicking links in the sidebar (e.g. on mobile)

- Prevent scrolling when clicking links in the sidebar (e.g. on mobile)

- Prevent scrolling when clicking links in the sidebar (e.g. on mobile)

- Prevent scrolling when clicking links in the sidebar (e.g. on mobile)

- Prevent scrolling when clicking links in the sidebar (e.g. on mobile)

- Prevent scrolling when clicking links in the sidebar (e.g. on mobile)

- Prevent scrolling when clicking links in the sidebar (e.g. on mobile)

v7.4.0

Nov 25 2017

Added

- Allow markdown in copyright string
- Added `theme_color` front matter property to override the value of the live `theme_color` option on a per-post basis. Will use `accent_color`
- Added `theme_color` site setting to set the value of `theme-color` on the user interface. Will use `accent_color`
- Added `cookies_banner` setting

```
# file: _config.yml
hydejack:
  cookies_banner: true
```

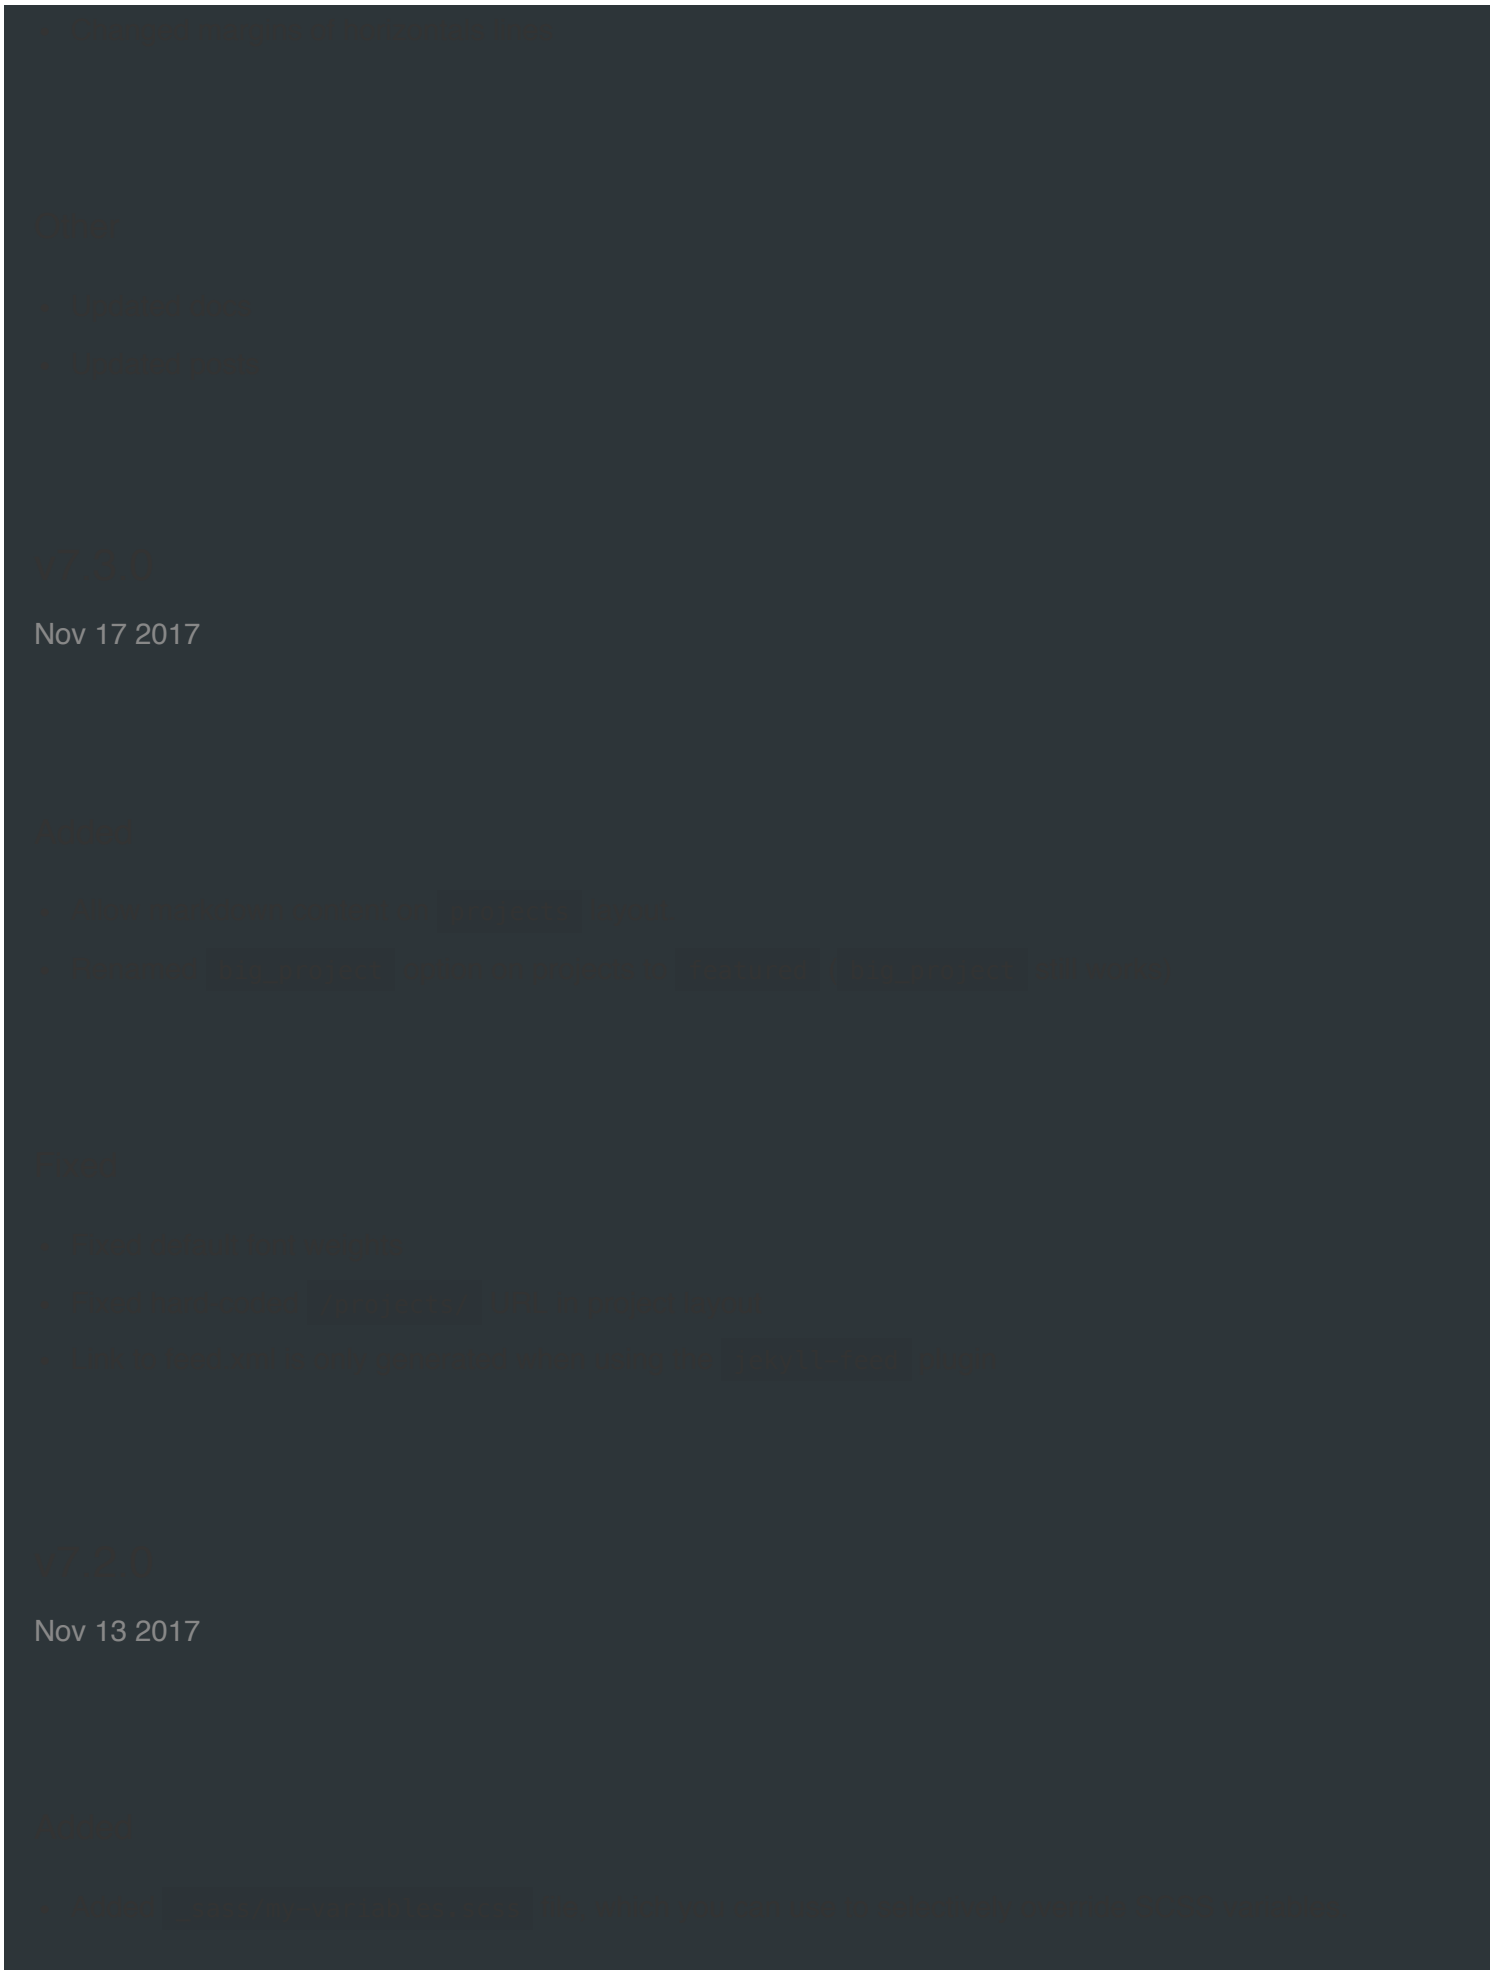
Enabling this setting will display a notice at the top of the page to inform visitors that your site uses cookies. The text can be changed in `_data/strings.yml` with the `cookies_banner.text` key. You can customize the look

```
# file: _data/strings.yml
cookies_banner:
  text: This site uses cookies.
  okay: Okay
```

Fixed

- Fixed a bug where the `<meta name="theme-color">` tag was not updated when switching between light and dark mode
- Fixed a bug where `theme_color` front matter was not correctly applied to the `theme-color` meta tag

Docs



- Font weights can now be configured via SCSS variables
  - `$font-weight-bold` for `<b>` tags
  - `$font-weight-body` for `<body>` tags and similar
  - `$font-weight-heading` for headings

Design

- Headings before and no longer after the list width, even with the header layout feature enabled
- Increased space between project cover image and text, as they look cramped on small screens

Bugs

- Fixed that some images in the header on iOS are not in proper position on small screens (#217)
- Search results are now centered, as they are no longer flexbox (#218)
- Search results are now displayed correctly when the search field is empty (#219)

v7.1.1

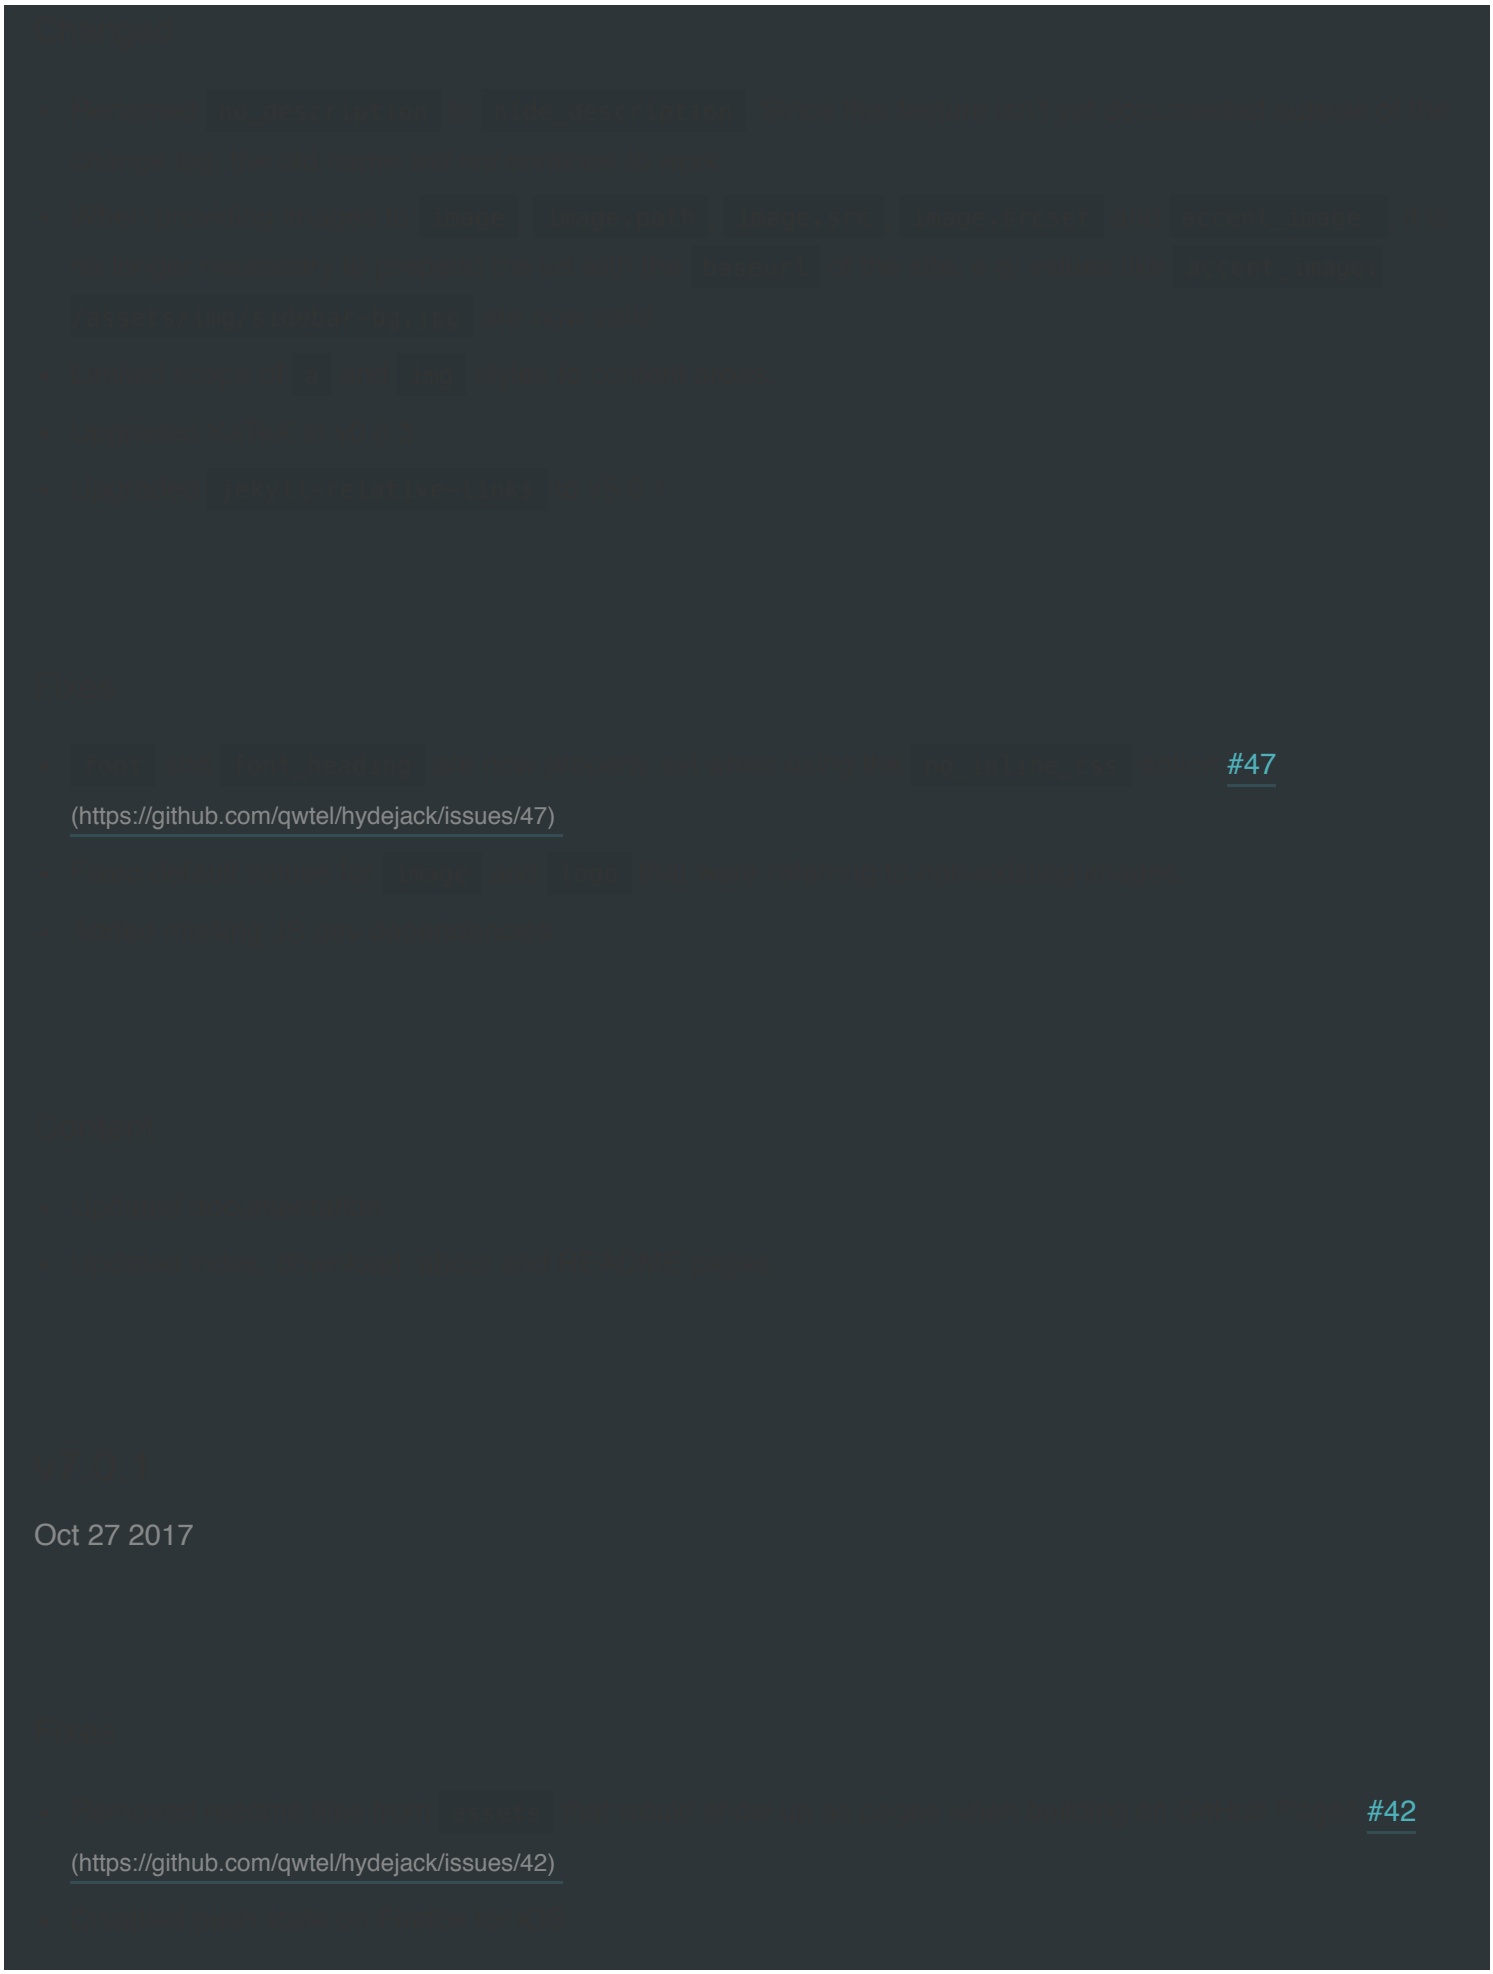
Nov 3 2017

Bugs

- Fix RTL header navigation (#212)

v7.1.0

Nov 2 2017



- Converted some default settings to `_config.yml`

Content

- Updated documentation

Removed

- Removed outdated example script in `hy-scripts.html`

v7.0.0

Oct 24 2017

License Change

The new version of Hydejack is licensed under GPL-3.0 (/licenses/GPL-3.0/). Version 6 and below is licensed under MIT. The change was necessary because Hydejack now includes [hy-push-state](https://qwtel.com/hy-push-state/) and [hy-drawer](https://qwtel.com/hy-drawer/), which are based on code from Hydejack.

How will this affect you?

- Hydejack is free for personal use and non-commercial use.
- Hydejack is free for commercial use as long as you don't distribute it.
- If you want to distribute Hydejack, you must release your source code under the same or a compatible license.
- Distributing includes making your code available to your clients, even when you are working on a private project.
- Using Hydejack in a SaaS or PaaS product is not permitted.

For more information, see the full text [here](/licenses/GPL-3.0/) or a human readable interpretation on [tl;drLegel](https://tldrlegal.com/license/gnu-general-public-license-v3-(gpl-3)).

buying (https://app.simplegoods.co/i/AQTTVBOE) PRO license (/licenses/PRO/)

```
work.

hydejack:
  no_push_state: false
  no_drawer: false
```

- All plugins (gems) are now optional. The generated version of the theme no longer uses any plugins by default. Unlike the download version, forks of Hydejack-enabled repositories cannot build websites served by GitHub Pages.
- Links to the `/404.html` page are no longer intercepted by the push state mechanism, which prevents stylesheets and images from being downloaded multiple times.
- Removed `_includes/head/favicons.html`. Favicons are now generated using the [RealFaviconGenerator](https://realfavicongenerator.net/).
- Removed `_includes/head/twitter.html`. Twitter cards are now generated using [jekyll-seo-tag](https://github.com/jekyll/jekyll-seo-tag).
- Removed `_includes/head/opengraph.html`. OpenGraph tags are now generated using [jekyll-seo-tag](https://github.com/jekyll/jekyll-seo-tag).
- Removed `_includes/head/schema.org.html`. Schema.org tags are now generated using [jekyll-seo-tag](https://github.com/jekyll/jekyll-seo-tag).
- Removed `_includes/head/custom.html`. Use `_includes/head-custom.html` instead.
- Removed `_includes/head/custom-google-analytics.html`. Use `_includes/head-custom-google-analytics.html` instead.
- Removed `_includes/head/custom-google-fonts.html`. Use `_includes/head-custom-google-fonts.html` instead.
- Removed `_includes/head/custom-mathjax.html`. Use `_includes/head-custom-mathjax.html` instead.
- Removed `_includes/head/custom-mermaid.html`. Use `_includes/head-custom-mermaid.html` instead.
- Removed `_includes/head/custom-twitter-cards.html`. Use `_includes/head-custom-twitter-cards.html` instead.
- Removed `_includes/head/custom-opengraph.html`. Use `_includes/head-custom-opengraph.html` instead.
- Removed `_includes/head/custom-schema.org.html`. Use `_includes/head-custom-schema.org.html` instead.
- Removed `_includes/head/custom-favicons.html`. Use `_includes/head-custom-favicons.html` instead.
- Removed `_includes/head/custom-push-state.html`. Use `_includes/head-custom-push-state.html` instead.
- Removed `_includes/head/custom-no-push-state.html`. Use `_includes/head-custom-no-push-state.html` instead.
- Removed `_includes/head/custom-no-drawer.html`. Use `_includes/head-custom-no-drawer.html` instead.

Added

- Support for [jekyll-seo-tag](https://github.com/jekyll/jekyll-seo-tag).

format directives (http://ruby-doc.org/core-2.4.1/Time.html#method-i-strftime)

https://schema.org/Person (https://schema.org/Person) hCard (http://microformats.org/wiki/hcard)

https://schema.org/CreativeWork (https://schema.org/CreativeWork)

Structured Data Testing Tool (https://search.google.com/structured-data/testing-tool/)

```

  background: 'linear-gradient(to bottom, rgba(35,62,76,1) 0%,rgba(60,146,158,1) 50%,rgba(2
```

Performance

- Reduced building time during development. Roughly 60% of the time was spent rebuilding files when Gulp detects a new one and recreates the `_site` tag. Production builds are unaffected. Details see here (/docs/writing/#a-word-on-building-speeds)

Design

- The header background image is no longer overlapping the menu.
- Added support for `no_break_layout` to prevent the header image from overlapping the menu. This is useful if you have a header image that is not designed to overlap the menu. Add the following to your `_config.yml`:

```yaml
hydejack:
  no_break_layout: true
```

- Fixed a bug where the header image would overlap the menu on `Edge` and `Safari`.
- Fixed a bug where the header image would overlap the menu on “suffer from design” (https://lostinmobile.com/2016/10/25/im-suffering-from-design/)

v6.6.0

Aug 7 2017

- Dependencies from external contents have been removed (with the exception of those that are required or derived and optional Google Analytics, Google Fonts and Disqus) instead, they are now located in the assets folder and managed via Bower.
- `#article` is no longer limited on pages that do not contain much content.
- `pre.load` has not no longer and `on.load` instead callbacks are registered in `run.js` now.
- Code in code blocks is no longer scaled down more than `.75em`. To make this change open the stylesheet `_sass/hydejack/_base.scss` and add the following:

```
pre code { font-size: .75em; }
```

- Added `.no-lines` and `.no-gutter` to make it easier to use Hydejack without customizing the stylesheet. This is especially useful when using the Dark Default variant of the theme.

v6.5.0

Jul 27 2017

- The `.no-transition` class now also disables transitions on `::before` and `::after` pseudo elements.
- Fixed a bug where the `.sidebar-toggle` and `.search-toggle` buttons were not displayed correctly when `.no-js` was set.

```
gems:
  - jekyll-default-layout # new
  - jekyll-feed
  - jekyll-optional-front-matter # new
  - jekyll-paginate
  - jekyll-redirect-from
  - jekyll-relative-links # new
  - jekyll-sitemap
```

```yaml

```

Jun 23 2017

v6.4.0

Jun 21 2017

In this release I've added a "Next/Previous" section to the bottom of every page, making it easier to navigate through your collection and discover other projects. Also, it's now possible to display social media icons in the footer. Additionally, you can now specify an image for each post in the feed.

For more on how to add these features, see the new section in the docs: docs/writing (/docs/writing/)

Another noteworthy feature is improved support for localized dates and a more consistent use of `lang` attributes. Check out the changelog for more details.

Added

- Added "Next/Previous" section to the bottom of every page (disable via `theme.nav: false`)
- Added social media icons to footer (see `_config.sample.yml` for available options)
- Added `feed.image` to specify an image for each post in the feed (see docs/writing (/docs/writing/) for more info)
- Added `site.data.locales` to override default date formats (see `_data/locales.sample.yml`)
- Added `site.time_format` to specify a time format
- Added `site.data.locales` to override default date formats
- Added `lang` attribute to `<time>` elements

Changed

- Moved `site.author.picture` to `site.author.avatar` (`site.author.picture` will be deprecated in v7)
- Moved `site.author.email` to `site.author.email` (`site.author.email` will be deprecated in v7)
- Moved `site.author.twitter` to `site.author.twitter` (`site.author.twitter` will be deprecated in v7)
- Changed `site.author.email` to `site.author.email`
- Changed `site.author.twitter` to `site.author.twitter`
- Changed `site.author.picture` to `site.author.avatar`

chapter on third party scripts (/docs/scripts/)

v0.2.0

May 29 2017

v0.1.1

May 23 2017

v0.1.0

May 15 2017

May 3 2017

Hydejack now always evaluates to `true` in JavaScript, even when `false` was set. Previously, `false` was treated as `true` in JavaScript, but `false` in Sass. This change was done to make it easier to work with Hydejack's settings in JavaScript. Unfortunately, this change will break your site if you explicitly set a setting to `false`. Please update your settings accordingly.

Major

Projects are now created and managed through `hydejack`. This has a number of benefits. First of all, a version check will be performed every time `hydejack` is executed. This will help to make the upgrade path smoother. Second, projects created this way will be smaller, as files which have not been changed by the user will be omitted. Finally, this change will make it easier to add new features in the future.

- Most files are moved from the `_sass` directory into `_sass/hydejack`.
- The `_sass/hyde.scss` file has been renamed to `_sass/hydejack.scss`.
- `_sass/hydejack` folder has been renamed to `_sass/h` to make the theme compatible with Jekyll's native theming.
- Many files have been removed and will be copied from the gem directory instead.
- The `_config.yml` file has been split into `_config.yml` and `_config_hydejack.yml`.
- Add `_data/authors.yml` to provide author information.
- Add `_data/social.yml` to configure the order of social media links.
- Add `_data/share.yml` to configure the order of share links.
- Add `_data/comments.yml` to configure the order of comment providers.
- Add `_data/strings.yml` to configure strings.

See the migration guide (/docs/upgrade/) for more information on how to upgrade.

Minor

- Add `_sass/hydejack/_variables-dark.scss` to provide variables for dark mode.
- Add `_sass/hydejack/_variables-light.scss` to provide variables for light mode.
- Add `_sass/hydejack/_variables-user.scss` to provide variables for user customizations.
- Add `_sass/hydejack/_variables.scss` to provide variables for the theme.
- Add `_sass/hydejack/_vendor.scss` to import vendor CSS.
- Add `_sass/hydejack/_mixins.scss` to provide mixins for the theme.
- Add `_sass/hydejack/_base.scss` to provide base styles for the theme.
- Add `_sass/hydejack/_components.scss` to provide styles for components.
- Add `_sass/hydejack/_layout.scss` to provide styles for layouts.
- Add `_sass/hydejack/_utilities.scss` to provide utility classes.
- Add `_sass/hydejack/_print.scss` to provide styles for print.
- Add `_sass/hydejack/_overrides.scss` to provide styles for overriding the theme.
- Add `_sass/hydejack/_user.scss` to provide styles for user customizations.
- Add `_sass/hydejack/_vendor-prefixes.scss` to provide vendor prefixes.
- Add `_sass/hydejack/_vendor-variables.scss` to provide variables for vendor CSS.
- Add `_sass/hydejack/_vendor-mixins.scss` to provide mixins for vendor CSS.
- Add `_sass/hydejack/_vendor-overrides.scss` to provide overrides for vendor CSS.
- Add `_sass/hydejack/_vendor-user.scss` to provide user customizations for vendor CSS.
- Add `_sass/hydejack/_vendor-dark.scss` to provide styles for dark mode.
- Add `_sass/hydejack/_vendor-light.scss` to provide styles for light mode.
- Add `_sass/hydejack/_vendor-print.scss` to provide styles for print.
- Add `_sass/hydejack/_vendor-components.scss` to provide styles for components.
- Add `_sass/hydejack/_vendor-layout.scss` to provide styles for layouts.
- Add `_sass/hydejack/_vendor-utilities.scss` to provide utility classes.
- Add `_sass/hydejack/_vendor-base.scss` to provide base styles for the theme

v6.2.0

Sep 29 2016

- Prevent stretched FOUC

v6.1.0

Sep 28 2016

- Cross-browser compatibility improvements
- Added features tests
- Fixed layout in IE 10 and 11
- Disabled stylesheet load JS in IE 9 and below

v6.0.0 (The Fast One)

Sep 16 2016

- Now 100 points in Google's PageSpeed Insights (https://developers.google.com/speed/pagespeed/insights/?url=http%3A%2F%2Fqwtel.com%2Fhydejack%2F)
- Improved FOUC (https://en.wikipedia.org/wiki/Flash_of_unstyled_content)

- Centered code blocks are used to indent and the documentation was built to fallback safely.

In order to minify the CSS and make it more readable it was split manually in SCSS.

Minor

- Centered media queries on page load.
- Tabindex for skip navigation.
- Several media query issues resolved with Edge.

Fixes

Text sizing part of the release, but the images have been moved to themselves and resolving and help with loading speed for small (normal images get compressed by 20% much better).

v4.0.1

Sep 11 2016

- Fix post meta date and tags margin.

v4.0.0 (Social Media Impocalypse)

Aug 30 2016

Breaking

- Drop support for [deprecated] font-smoothing.
- Remove [deprecated] `$enable-flexbox` variable.
- Remove [deprecated] `$enable-rtl` variable.
- Remove [deprecated] `$enable-grid-classes` and `$enable-pagination` variables.

May 7 2016

Jekyll (http://jekyllrb.com) @qwtel (https://twitter.com/qwtel)

Hyde (http://hyde.getpoole.com) hydejacked

(http://media3.giphy.com/media/makedRIckZBW8/giphy.gif)

Features

Links / Pills are very customizable about how you are going to use it.

Features include:

- Tons of options added / cleaned for making / keeping backward compatibility
- Custom Pages compatible tag support (based on this post (http://www.minddust.com/post/tags-and-categories-on-github-pages/))
- Customizable list styles and counters (reset per site, per tag and per post)
- Optional author section at the bottom of each post
- Optional comment section powered by Disqus
- Layout for posts grouped by year
- Wide array of social media icons on sidebar
- Math rendering with KaTeX (https://khan.github.io/KaTeX/)

v2.0.0 (Hyde)

Jan 2 2014

v1.0.0 (Hyde)

Oct 15 2013
